

## **Maintaining Your Vehicle Wrap**

Caring for your vehicle wrap is very important. To keep your investment looking great you will need to follow a few basic rules.

- 1) Keep your vehicle clean. Hand washing your vehicle with a sponge and mild soapy water is ideal however a high pressure sprayer can be used from a distance with tepid or cold water. Never put the nozzle directly on your wrap or against a seam. The vinyl could rip or tear. Also, never take your vehicle through an automatic car wash with bristles. The bristles can damage your vinyl wrap which could lead to costly repairs.
- 2) Hand wax your vehicle. Do not use a buffer. Waxing your vehicle at least once every 3 months will help keep protected from the elements. The wax we suggest you use is Turtle Wax Ice. If you have a detail shop wax your vehicle make sure the wax they use is safe for vinyl. Waxing your vehicle will also help the de-install process allowing the vinyl to come off leaving little to no adhesive.
- 3) Avoid parking under trees for long periods of time. Sap from certain trees can damage your investment and ruin your wrap.
- 4) Window perf should be waxed as well. This will help protect the laminate and longevity of the vinyl. Never use a high pressure sprayer on the window perf. The sprayer will damage the perf.
